Using Photoshop Basics Photoshop is a powerful tool for creating and editing images. People who work with images as professional artists, photographers, or web designers will often use Photoshop. However, even if you just want to have fun with images, learning how to use Photoshop is one of the best investments you can make. Photoshop is a raster graphics editor. Like most image editors, it can be used for everything from drawing lines and creating a collage of photos to a single image editing to crop and modify. Photoshop, however, can do it all, and even more. With this powerful tool, you can create and edit layers of different types of images, add special effects and effects, and move and cut parts of images. If you don't know what layers are, don't worry. Photoshop provides you with a friendly interface that will show you the images that are available to use as layers. Furthermore, there's an entire section where you can learn about using layers. To create a new layer in Photoshop, click on the Layer icon in the header. When you do so, a new layer appears at the top of the canvas. When creating new layers, you can name it or start using one of the pre-made names, including Background, Shadows, and Text. With the background layer selected, you can now click on the Add Layer Mask button, which is on the bottom of the layer, and the image becomes visible again. The background is now completely visible (no layer mask is shown). However, the rest of the image is still invisible. Now, the background layer mask allows you to change the whole layer's opacity, darken the background, and smooth the image's borders. Multiple images can be added to the layer as sublayers. Photoshop uses the terminology for layers but they aren't always compatible. Photoshop uses layers in the exact same way as the Gimp. However, for simplicity, Gimp calls them "slides." You can learn more about adding sublayers on the side of the GIMP's document window. You can also change the blending mode of the individual sublayers using the Layer Properties dialog, which you open by double-clicking on the layer name. This will open a dialog box where you can select, from among 20 options, the blending mode (or modes) to use. To learn more about this, check out the Microsoft Office's Cheat

I'm going to be able to do it through my Web site, through my staff, through the people that are around me, and I don't want anybody else calling the shots. But I want to let everybody see what I think and how I think it should be done."
